## VN30 performance

The VN30 index formed the closing price at 1,117 pts. Relating to foreign trading, foreign investors' selling pressure is active with a net sell value of VND380bn. Selling activity mainly spread to HPG, STB, and CTG.

## VN30 Future chart Volatile trading environment

VN30F2210 has entered the volatile trading environment which means the short-term bottom has high probability to occur. The probability for intraday rebound phase to occur is also increased. Although there is the active bearish swing, intraday rebound should occur to test the market demand as well as 1,100 pts zone is approached. OI (Open interest) kept fluctuating within 45,000-55,000 contracts, implying that the bearish swing is still active and the turning point is not ready. However, volatility level would increase in upcoming sessions when the contract has started to enter the balance stage of supply and demand (1,100 pts area).

## Technical strategy

The captured short positions on VN30F2210 should be held and stop the loss only when there is the closing price above 1,250 pts level. (Hourly chart)
