

Forming the intraday bottom

VN30 performance

The VN30 index formed the closing price at 1,039 pts. Relating to foreign trading, foreign investors' selling pressure is active with a net sell value of VND380bn. Selling activity mainly spread to HPG, STB, and CTG.

VN30 Future chart: Bearish momentum is still strong

Selling pressure has been paused when 1,000 pts area is approached. However, selling pressure near 1,050 pts area is still strong. Although there is the active bearish swing, intraday rebound should occur to test the market demand as well as 1,000 pts zone is approached. OI (Open interest) kept fluctuating within 45,000-55,000 contracts, implying that the bearish swing is still active and the turning point is not ready. As the bearish swing is still active and selling pressure is still high near 1,050 pts zone, the intraday rebound phase should be used to trigger new short position.

Technical strategy

The captured short positions on VN30F2210 should be held and stop the loss only when there is the closing price above 1,150 pts level. (Hourly chart)
