

# No sign for upward swing

## VN30 performance

The VN30 index formed the closing price at 1,050 pts. To be specific, GVR (+4.5%), SSI (4.0%), VCB (+3.6%), BID (+2.9%), and STB (+2.8%) were top 5 index leaders. Relating to foreign trading activity, demand came back to high level with net sell value was VND140bn, mainly driven by large buy orders on SSI, HPG, and VNM.

## VN30 Future chart: Volatile trading zone

Selling pressure has come back when the instrument approached 1,050 pts zone. Particularly, on wider time frames, the instrument is still traded below major MAs, the bearish leg is still active. Besides, selling pressure is still strong near 1,060 pts zone which means the current intraday rebound could be faded. Major MAs show no sign of upcoming valid market leg. On Hourly chart, the intraday rebound phase is paused but the instrument has high probability to enter the high volatile trading period. 1,050 pts zone is the barrier for the rebound phase which has low probability to be broken in the short-term. During this trading day, high volatile period could occur where false signals could be generated. In this case, traders should stay on the sidelines in order to avoid false trading signals.

## Technical strategy

Traders should stay on the sidelines in order to avoid false trading signals.
