

# Approaching the strong selling zone

## VN30 performance

The VN30 index formed the closing price at 1,101 pts. To be specific, SSI (+3.9%), PDR (+3.7%), NVL (+2.8%), MSN (+2.8%), and VIB (+2.4%) were the top 5 index leaders. Relating to foreign trading activity, selling pressure continued with net sell value was VND38bn, mainly driven by large sell orders on VNM, CTG, and GAS.

## VN30 Future chart: Selling pressure near 1,100 pts zone

Demand has come back to the market, respecting the 1,050 pts level, forming the higher low and higher high pattern. However, 1,100 pts zone is the market peak which means selling pressure is active near this area. On Daily chart, the instrument is traded above major MAs, signaling the stable bullish momentum. Selling pressure is still strong near 1,100 pts zone which means the volatile period could occur. Major MAs on wider charts show the weakness of selling pressure. On Hourly chart, bullish momentum is stable which increases probability for the upward swing to continue. 1,050 pts zone is the demand zone for the rebound phase which has low probability to be broken in the short-term. Due to the favorable risk/reward ratio, traders could hold the captured long positions. For new long positions, minor correction is needed to have good entry point.

## Technical strategy

Long positions on VN30F2306 should not be closed and stop the loss when there is the closing price below 1,050 pts level (Hourly chart).
