

Demand is still weak

VN30 performance

The VN30 index formed the closing price at 1,140 pts. Relating to foreign trading activity, demand surged with net buy value was VND50bn, mainly driven by large buy orders on VNM, STB, and HPG.

VN30 Future chart: Breaking 1,160 pts zone

Selling pressure is increasing, pushing the VN30F2310 to close below major MAs, breaking 1,160 pts zone and there is no place for the bullish swing to come back to the market. Major MAs are sloping downward, implying the active bearish momentum and the bullish move is completely ended. Selling pressure near 1,160 pts zone is active which needs time to fully consume, this area would be the solid congestion zone. The bullish swing is completely paused and long positions are not valid during this period. Nevertheless, oversold condition is reached as well as volatile period is active. The opening gap on 22 Sep provided the bad entry point for the VN30F2310. However, the broken 1,160 pts level has turned around to act as the solid congestion zone. Thus, new short positions could be opened based on this level.

Technical strategy

Sell positions on VN30F2310 should be held and stop the loss when there is the closing price above 1,160 pts level (Hourly time frame).
